SYMPATHETIC SOLUTIONS TO CLASSIC ISSUES...

TSR WHEEL BEARING KIT (BMW R series 1976-84)

Cast wheels £155, spoked wheels £180, VAT & UK delivery included

This kit converts front and rear wheel bearings from taper roller bearings to ball bearings, thus eliminating the need to shim your bearings. It works with the original cast and spoked wheels that were fitted to most models between around 1976 and around 1984. All spacers are CNC machined from aircraft grade alloy by us here in the UK.

Please read ALL of this description carefully to ensure that this kit is suitable for your needs.

CAST WHEEL KIT

SPOKED WHEEL KIT

Motorcycle wheels normally have ball bearings because, unlike a car, there is no side/end loading on a motorcycle wheel – so for a motorcycle, taper roller wheel bearings are completely unnecessary. And taper roller bearings need to be adjusted (shimmed) when fitted, and often require subsequent re-lubrication and re-shimming from time to time. Our sealed-for-life bearing kit eliminates the need for shimming and lubrication. Once installed, even if you fit new bearings, you will never have to shim your bearings again. Our bearing spacers are made to order to suit each wheel, so you need to measure your hubs before we can make your spacers, but measuring is quick and easy using the tool and the instructions that we provide.

The ordering process is as follows... Once you have ordered your kit, we'll send you a measuring tool & instructions, along with all of the kit parts except for 2 spacers, which we will make to suit your hubs. Once we have your measurements, we'll arrange collection of the measuring tool, make the 2 spacers, and send them to you. Allowing for postage, the whole process usually takes around 1 to 2 weeks.

Orders, payment & delivery/collection: If you want to place an order, drop us an email and we'll take it from there. Payment is by bank transfer (preferred) or Paypal. Royal Mail 48 Tracked delivery is free for orders over £150. You can collect by prior appointment if you prefer – we are near Maidstone in Kent.

Important: While our products can be successfully installed by any competent/experienced home mechanic, we strongly recommend that you get your installation checked by a suitably qualified & experienced motorcycle technician. **If you would like your kit professionally installed**, we offer a fitting service at our workshop in Kent (contact us for details).
